

One Dorset Procurement Service

Atamis SOPs

Purpose

To establish a consistent, governed and auditable approach to managing procurement activity within Atamis, providing a single source of truth for ODPS procurement processes.

Scope

- Defines the standard operating procedures for procurement activity within Atamis
- Covers the end-to-end procurement lifecycle (Workplan → Project → Contract).
- Applies to all ODPS procurement activity across Trusts (UHD, DCH, DHC)
- Provides guidance on how Atamis should be used within ODPS
- It does not provide step-by-step system instructions
- Users should refer to Atamis user guides for system navigation and detailed instructions

1 ODPS Workflow Management SOP

SOP defining the rules for how procurement activity is initiated within Atamis at the Workplan, Project or Contract stages. It sets the appropriate entry point based on different scenarios, ensuring consistent workflow management across the team.

Guiding Principles

- Workplans support pipeline visibility and savings capture but are not required for all procurement activity.
- All procurement activity $\geq$ £25k must be captured via a Workplan unless urgent or unplanned.
- Email-based sourcing is permitted for procurement $<$ £50k.
- The Atamis project module must be used for procurement $\geq$ £50k.
- Controlled categories (e.g. maintenance, recurring contracts) require Workplans to ensure governance and visibility.

The table below defines the required Atamis entry point and sourcing approach by value and scenario:

Scenario	Workplan	Project	Contract	Min Quotes Requested	Replacement Workplan
Core Thresholds					
Transactional <£25k	No	No	No*	1	No
Tactical £25k-50k	Yes	No	Yes	2	Yes
Tactical £50k-relevant procurement threshold	Yes	Yes	Yes	3 or compliant procurement process	Yes
Strategic >relevant procurement threshold	Yes	Yes	Yes	compliant procurement process	Yes
Exceptions - line manager discretion					
Urgent/ Unplanned Activity (all thresholds)	No	Value dependent	Yes	Value dependent	Value dependent
*Controlled Categories < £50k - Maintenance - Recurring Contracts	Yes	No	Yes	Value dependent	Yes
Controlled Categories > £50k - Maintenance - Recurring Contracts	Yes	Yes	Yes	Value dependent	Yes
Non-Sourcing Agreements (NDA's / ITA/ MOU's/ Data Sharing Agreements ...)	No	n/a	Yes	n/a	n/a

2 ODPS Workplan SOP

SOP defining Atamis Workplan stages and a minimum data set to ensure consistent pipeline visibility and use of the Workplan as the single source of truth for procurement activity across teams.

Workplan Stage Definitions

Workplan Stage	Definition	Governance
Draft	Early identification of potential ODPS procurement work. Used to capture an idea or request with minimal information before any formal planning or resourced is committed. Also includes workplan activity that has been automatically generated from Atamis contract renewals.	No approval required
Pre-procurement	Initial scoping phase where ownership, requirements, stakeholders, estimated value and indicative commercial information are developed. The procurement requirement is sufficiently defined to determine the appropriate governance route and next steps.	No approval required
Business Case*	Commercial approach, governance route and delivery accountability are defined prior to entry into the reportable pipeline	Stage 1 – Pre-procurement approval (*if required)
Pipeline	Approved procurement work sufficiently defined to enable planning and reporting. Planned commercial start date captured (e.g. tender issue, mini-comp, CCN/SOW).	Stage 2 – Authority to commence commercial activity (if required)
Procurement	Active sourcing activity (e.g. tenders). Market engagement and procurement execution are underway in line with the agreed route and plan	Approval already granted
Contract Management	Contract has been awarded and is live. Focus shifts from sourcing to performance management and lifecycle control	n/a
Renewal Planning	Forward planning for an existing contract approaching expiry, including decision on re-procurement, extension or exit.	n/a
Completed	Procurement activity has concluded as intended. Record retained for reporting audit and historic reference.	n/a
Abandoned	Procurement Activity has ceased. Record closed to retain an audit trail.	n/a

Guiding Principles

- In total 31 are required to be completed by the 'Pipeline' stage.
- System-mandated fields increase by workplan stage; previously entered data is carried forward. (i.e. only incremental fields are added at each stage)
- ODPS-Mandated fields are local requirements to support governance, reporting and oversight.
- Definitions are provided to support consistent completion of ODPS mandate fields.

Workplan Fields

Workplan Stage	Workplan System Mandated Fields (22)	ODPS-Mandated Fields (9)
Draft (4)	Workplan Name Contracting Authority Current Workplan Stage	Procurement Team External Reference
Pre-procurement (12)	Existing Supplier (If Commercial Strategy is set to 2, 3, 4 or 5) New Contract Value exc Options exc VAT New Contract Value exc Options inc VAT Estimated Extension Option Value exc VAT Estimated Extension Option Value inc VAT Short Description Commercial Lead Existing Contract End Date (If Commercial Strategy is set to 2, 3, 4)	Commercial Lead Category Manager Procurement Delivery Lead Business Unit Contact Business Unit (tbc) Senior Contract Owner
Business Case (10)	Cost Centre Commercial Strategy Expected Contract Commencement Date Contract Durations (Months) Contract Type Public Procurement Regulations Procurement Route Procurement Delivery Lead Confirm the Cyber Security Certification Rationale for Cyber Security Decision	<i>No additional mandatory fields</i>
Pipeline (7)	Procurement start date CM Classification Primary CPV Category Primary Alternative Category	Commercial RAG
Procurement	<i>No additional mandatory fields</i>	<i>No additional mandatory fields</i>

Contract Management	<i>No additional mandatory fields</i>	<i>No additional mandatory fields</i>
Renewal Planning	<i>No additional mandatory fields</i>	<i>No additional mandatory fields</i>
Completed	<i>No additional mandatory fields</i>	<i>No additional mandatory fields</i>
Abandoned	<i>No additional mandatory fields</i>	<i>No additional mandatory fields</i>

ODPS – Workplan Supplementary Descriptions

Field	Definition
Procurement Team	Identifies the ODPS team accountable for delivery, reporting and ongoing ownership of the procurement activity oversight: • ODPS – Clinical Category Team • ODPS – NC CPS Category Team • ODPS – NC EFM Category Team • ODPS – Operational Team
Commercial Lead (M):	To categorise at ‘ <i>Senior category manager</i> ’ level to support reporting and Dashboard creation.
Category Manager:	To categorise at ‘ <i>Category Manager</i> ’ level to support Reporting and Dashboard Creation and indicates CM responsible for delivery
Procurement Delivery Lead	To Categorise at “Delivery Lead” Level to support Reporting and Dashboard Creation. Delivery Lead is responsible for delivery (and may be the same as <i>Commercial Lead</i>)
External Reference ID	Records the reference used to link the Atamis workplan to its supporting document set or folder. Used to support traceability, audit and file management.
Commercial RAG	Provides a high-level view of commercial risk or complexity associated with the procurement activity. Used to support prioritisation, escalation and pipeline oversight.
Business Unit (tbc)	Trust Specific Business Area/ to repurposed for Subcategories? (tbc)
Business Unit Contact	Trust Specific Business Contact (Budget Holder)
Senior Contract Owner	Trust specific business contact (Lead stakeholder)
Programme/Portfolio*	*if applicable: To group programme related activity (e.g. <i>NHP/EHR</i>)

3 ODPS External Reference SOP

SOP defining a single external reference to be used consistently outside of Atamis with naming conventions to ensure traceability across categories and teams

Sharepoint Filing Structure and associated Atamis hierarchy:

Guiding Principles

- An external reference provides a single ID linking Atamis records with SharePoint document storage
- Each reference is category-led, using an ODPS defined prefix that reflect which team is handling the procurement work.
- Numbers run sequentially within each category only
- A suffix indicates scope using a trust code: UHD, DHC & DCH for single - trust activity or ODPS for cross trust activity
- Capital will not be its own category. The category prefix should reflect what is being bought: e.g. ICT101-C-UHD with a Capital (C) flag in the reference

Category name	Prefix	Example External Reference
Digital	DIG	DIG101-C-UHD
Corporate & Professional Services	CPS	CPS021-ODPS
Community Commissioning	COM	COM006-DCH
Estates	EST	EST045-DHC
Soft Facilities Management	SFM	SFM019-UHD
Utilities	UTIL	UTIL007-ODPS
Surgical	SURG	SURG015-DHC
Clinical Services	CLIN	CLIN101-ODPS
Purchased Healthcare	PHC	PHC008-ODPS

4 ODPS Document Management SOP

SOP defining ODPS document management standards, including system of record and storage rules across platforms (e.g. Atamis and SharePoint), to ensure consistency and auditability.

Guiding Principles

- Signed contracts and formal amendments/ variations must be stored in Atamis.
- All working and supporting documents must be stored in SharePoint in line with SOP 3 (External Reference).
- SharePoint must be used as the primary document repository.
- A standard folder structure must be used across ODPS to ensure consistency and auditability, detailed in the below table.
- Pre-procurement planning documents must be stored within the *‘Pre-Procurement’* folder to maintain continuity and support future procurement activity.
- For recurring or re-procured contracts, the same folder and reference must be retained, with previous documents moved to the “Archived” folder.

Folder Structure

	Name 		
	 00 Workplan Information (WiP)		 
	 01 Project Initiation Document		 
	 02 Market Engagement – EOI		 
	 03 Procurement Adverts		 
	 04 Specification Documents		 
	 05 Tender Pack		 
	 06 Supplier Responses		 
	 07 Evaluations		 
	 08 Award Information		 
	 09 Contract Management		 
	 10 Audit and Lessons		 
	 11 Pre-procurement (Next Iteration)		 
	 12 Archived		 

5 ODPS Workplan Team management SOP

SOP defining the standard process for adding and managing Workplan team members to ensure consistent access control and governance.

Guiding Principles

- Access to Workplans must be managed through Workplan Groups to ensure consistent permissions across ODPS teams.
- Following Workplan creation, the owner must assign the relevant ODPS Workplan Group (Clinical, NC CPS, NC EFM or Operations) to ensure appropriate team visibility and access

Steps to add a Workplan Group

Step #	Action
1	Select the Team tab within the Workplan
2	Select New
3	Choose Workplan Group as the record type
4	Select the appropriate ODPS team
5	set Workplan permission = edit
6	Select Save

Figure 1 Select the team tab.

Figure 2 Select New.

Figure 3 Select Workplan Group.

Figure 4 Select ODPS team, set permission to edit and save

6 ODPS Sourcing Routes and Procurement Thresholds SOP

SOP defining the standard sourcing routes, procurement thresholds and sourcing requirements

Guiding Principles:

- For procurement activity below £50k email-based sourcing is permitted.
- The Health System project templates on Atamis to be used for procurements above £50k to ensure compliance and consistency.
- Health System project templates will be selected based on the procurement approach and can be used as the default starting point, with local tailoring applied as necessary.

Sourcing Process	Transactional		Tactical		Strategic
Threshold	> £1 - £10,000	> £10,001- £25,000	>£25,001- £50,000	>£50,000- relevant procurement threshold	>Relevant Procurement Threshold
Minimum Quotes Requested	1		2	3 Quotes or Compliant Procurement Process	Compliant Procurement Process
Team	Requester-led	Requester-led with Ops-oversight	Strategic	Strategic	Strategic
Sourcing tool	Email		Email	Atamis	Atamis
Atamis Sourcing Templates	N/A		N/A	Health System Project Templates	Health System Project Templates

7 ODPS Contract Management SOP

SOP defining the mandatory contract fields that must be completed within Atamis and the use of the KPI module to support contract governance, compliance and auditability across ODPS.

ODPS Mandated fields for Contract Module and Supplementary definitions

Field	Definition
Procurement Team	Identifies the ODPS team accountable for delivery, reporting and ongoing ownership of the procurement activity oversight. ODPS – Clinical Category Team ODPS – NC CPS Category Team ODPS – NC EFM Category Tea, ODPS – Operational Team
Owner	To categorise at “ <i>Senior category manager</i> ” level to support reporting and Dashboard creation. (
Commercial Contract Manger	To Categorise at “Category Manager” Level to support Reporting and Dashboard Creation and indicates CM responsible for delivery
Procurement Delivery Lead	To Categorise at “Delivery Lead” Level to support Reporting and Dashboard Creation. Delivery Lead is responsible for delivery may be the same as Commercial Lead (
External Reference ID	Records the reference used to link the Atamis workplan to its supporting document set or folder. Used to support traceability, audit and file management.
Business Unit (tbc)	Trust Specific Business Area/ to repurposed for Subcategories?
Business Unit Contact (doesn't exist in contracts)	Trust Specific Business Contact (Budget Holder)
Senior Contract Owner	Trust specific business contact (Lead stakeholder)
Programme/Portfolio	To group programme related activity if applicable (e.g. NHP/EHR)

Guiding Principles: KPI Tab

- For contracts with a total value exceeding £5m, a minimum of three KPIs must be defined and published in line with Procurement Act requirement.
- For these contracts, KPI performance must be assessed and reported at least annually through a contract performance notice.
- For contracts above £5m, users must utilise the Atamis KPI module to support the definition, tracking and reporting of KPIs.
- The KPI module should be used primarily as a compliance tool to support regulatory reporting requirements, rather than as a full performance management system.
- For contracts below £5m, use of the KPI module is optional and should be based on the complexity, risk, and need for performance tracking
- Where used, the KPI module should act as a prompt for contract owners to review and assess supplier performance periodically
- Users must ensure that KPI data entered in Atamis aligns with any published or reported contract performance information to maintain consistency and auditability

8 ODPS Benefits Capture SOP

SOP defining a standardised ODPS benefits capture and reporting model aligned to the Forecast → Publish → Validate lifecycle, incorporating confidence-based forecasting and Finance-aligned evidence and validation.

Benefits Lifecycle model

Plan / Forecast (Workplan stage)

- Planned benefits and savings must be recorded in Atamis during the Workplan stage to support early pipeline visibility.
- Forecast benefits and savings must be updated as procurement planning matures and further information becomes available.
- A confidence level must be applied to each forecast to reflect the maturity and reliability of the expected benefit.

Publish (Pipeline visibility)

- Benefits and savings must be included within ODPS pipeline reporting to support consistent visibility of forecast value.
- Pipeline reporting must provide forward-looking, Trust-level visibility of expected benefits and savings.

Validate (Contract stage)

- Contracted benefits and savings must be recorded in Atamis after contract award to provide a confirmed post-award baseline.
- Achieved savings must be tracked and updated during contract delivery to reflect realised value.
- Finance validation must be obtained before savings are included in formal reporting.

Workplan Savings Attribution

- Benefits and savings must be captured at Trust level using the Contracting Authority field to support clear attribution and reporting.
- Transactional savings must be managed using a ODPS defined 'bucket' approach to support proportionate capture and reporting.
- Low-value savings below £25k do not require individual Workplans where they are captured through the agreed transactional savings approach.

Workplan Saving/Benefit (2)

	Workplan Sav...	Contracting Authority	Business U...	Planned Sa...	Forecast S...	Applies Be...	Savings Type
1	☐ PSB-130138	Dorset County Hospital N...			£0.00	24/6/2026 - 24/...	Cashable Saving
2	☐ PSB-130139	University Hospitals Dorse...			£0.00	24/6/2026 - 24/...	Cashable Saving

Saving split across different Contracting authorities within the Workplan Module

Core Controls

- Savings must be supported by a defined baseline before they are recorded or reported.
- Savings must be calculated net of associated costs to reflect the true benefit delivered.
- Savings must be recorded once only to avoid duplication in reporting.
- All savings must be recorded against the relevant Workplan at Plan / Forecast stage and against the relevant Contract at Contracted / Achieved stage.

Contract Module Savings Attribution

- Primary savings attribution must be recorded against the relevant Contracting Authority to support clear Trust-level reporting.
- Multi-Trust savings must use an agreed split methodology, based on cost centre allocation or a pre-agreed percentage split, to support consistent attribution across participating Trusts.

3	☐ CS-13868	Dorset County Hospital NHS Foundati...		£0.00	24/6/2026 - 24/...		

Saving split across different Contracting authorities within the Contract Module

Stage 1 - Plan and Forecast

- Planned benefits and savings must be recorded when the Workplan is created to support early pipeline visibility.
- Forecast savings must be updated as scope evolves, the route to market is defined and volumes are ratified.
- Each Workplan must include an assigned Procurement Lead, indicative value and indicative timeline.

Stage 2 - Publish

- Workplan savings must feed into ODPS pipeline reporting to support consistent visibility of expected benefits.
- Savings values must be clearly labelled as planned or forecast to support consistent interpretation and reporting.

Stage 3 - Contract

- Savings must be treated as contracted once the contract has been awarded and the value and term have been confirmed.
- Benefits and savings must be recorded in the Atamis contract record using a defined baseline method.

Stage 4 - Achieve

- Savings must be tracked during the contract lifecycle to confirm whether the expected benefit is being realised.
- Actual performance must be monitored against contracted value and expected volumes

Stage 5 - Validate (Strategic procurements only)

- Validation for strategic procurements is to be undertaken at the discretion of the category lead.
- Ongoing governance should review benefits and savings performance against forecast and contracted expectations.

9 ODPS Savings Reporting Standards

SOP guiding standardised savings reporting outputs and formats for Trust Finance and PMO teams, ensuring consistent, comparable reporting across ODPS.

Standard Reporting Outputs

- Standard reporting outputs must compare forecast, contracted and achieved savings to support consistent benefits tracking.
- Pipeline savings must be reported on a forward-looking basis to provide visibility of expected future benefits.
- Savings must be reported by Trust to support clear organisational attribution and local financial visibility.
- Savings must be reported by category to support comparative analysis, portfolio oversight and category-level performance monitoring.
- Cashable and non-cashable benefits must be clearly identified to support consistent reporting and interpretation by Trust Finance and PMO teams.

Reporting Framework

- Savings reporting must be derived from Atamis Workplan and Contract records to support a consistent source of reporting data.
- Savings reporting must follow the standard monthly ODPS reporting cadence.
- The standard ODPS savings dashboard report must be used to support consistent reporting, review and oversight.

Definitions & Alignment

- Savings reporting definitions must distinguish clearly between procurement benefit, contracted saving, achieved saving and realised financial saving to ensure consistent interpretation across Trust Finance and PMO teams.
- Savings levers must be recorded at Workplan level to support consistent savings reporting, analysis and alignment with the ODPS benefits capture process.

Standard Operating Model

- Savings reporting must follow a monthly reporting cycle as the minimum standard operating cadence.
- Controlled reporting outputs must be produced through ODPS dashboards and approved extracts to support consistent reporting governance.
- Ad hoc reporting must follow the same approved definitions, logic and reporting controls as standard ODPS reporting outputs.

Reporting Controls

- All reporting outputs must be traceable to Atamis and based on consistent approved data to support reporting integrity and auditability.
- Reporting variances must be explained and reviewed monthly to support consistent oversight and corrective action.
